DETAILED ACTION

Status of the Claims

Claims 1-8 are currently pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted. The inventions listed as Groups I-VII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: ***.

Group I. claim 1 , drawn to a method of producing thiazole compounds .

Group II. claim 2, drawn to a method for producing oxazole compounds.

Group III . claims 3,4, drawn to a method of producing bridged oxazole-thiazole compounds and bridged oxazole thiazole compounds.

Group IV. claim 5, drawn to a combinatorial library of oxazole-thiazolo compounds.

Group V, claim 6, drawn to a combinatorial library of stereochemically pure thiazole compounds.

Group VI, claim 7, drawn to a method of preparing a library of Group IV.

Group VII , claim 8, drawn to a method of preparing a library of Group V.

The inventions listed as Groups I-VII do not relate to a single inventive concept under PCT Rule 13.1 because. Under PCT Rule 13.2. they lack the same or corresponding special technical features for the following reasons: The compounds and libraries are known in the art hence the structural features which would unite the inventions do not constitute special technical features. E.g. see WO 95/04277 (e.g. page 6, formula I) describe the presently claimed formula (12) oxazole/thiazole compounds and libraries thereof. See also Tam, Flynn, Ogino and Tuchi documents cited in the search report of Parent application PCT/US00/07564 for teaching of oxazole/thiazole compounds.

Election of Species (For Groups I-VII)

This application contains claims directed to more than one species of the generic invention. These species are deemed to be patentably due to different compound structure which compounds possess different biological/physical/chemical properties, are capable of separate manufacture and/or use and which require separate and individually burdensome manual/computer classification/structure/bibliographic searches.

The species are as follows: structurally different individual oxazole, thiazole and bridged oxazole thiazole compounds.

Applicant is required, in reply to this action, to elect a single species (e.g. a single compound) to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
